Excerpt: . . . called for, except possibly in cases of variable speed direct-current control. At the same time, with alternating current machines it may become necessary to cut down the field temporarily to even less than one-half of its normal value, for the purpose of drying out the coils after installation or for evaporating moisture contained in and around coils that have been exposed to dampness. Reduction for a very short period may also be needed in perfecting the adjustment of voltage regulators. H. H. Barnes. Do not know of any circumstances that would require such a condition. B. E. Morrow. K 28. How much power is gained by direct-connecting instead of belt-driving The loss in belt friction is saved, and in a three-bearing set about 25 per cent of the bearing friction is saved also. B. E. Morrow. It depends altogether on the belting used. M. C. Turpin. K 29. What is the best metal for bearings on dynamos Babbitt is almost universally used for bearing metal on electrical apparatus. P. M. Lincoln. K 30. What are the objections, if any, to using air suction instead of air blast for cleaning electrical apparatus Air suction has a maximum possible pressure (or suction) of less than 15 pounds, which is not sufficient to dislodge dirt from deep crevices. It is also impossible, and would be dangerous, to have the suction nozzle reach into crevices around electrical apparatus, and unless the nozzle comes into very intimate contact with dirt and...
